

We care.

At ForestrySA we care for the environment.

We strive to minimise waste and reduce greenhouse gas emissions, in fact our business naturally stores carbon.

Our aim at ForestrySA is to maximise the benefit to the environment from all our activities.

Our Head Office is the first building of its type in South Australia designed to comply with the new Green Building Council of Australia 5-star green rating system.

The 5-star green rating system recognises the energy saving characteristics designed into our building to protect the natural balance of the site by minimising water use and protecting the local environment.

Our building relies on natural light and water recycling to reduce our carbon emissions. The use of smart technology including an advanced building management system, also allows us to reduce carbon emissions.

Our Forestry Management System has enabled us to create a safe work environment and achieve quality, sustainability and environmental certification to international standards ISO 9001, ISO 14001 and AS 4708 (Australian Forestry Standard).

We care.
